FULLY AUTOMATIC

SAM 360P analyzes a person's heart rhythm and delivers an electric shock completely automatically. SAM 360P is the first heart-starter in the world equipped with a unique technology to detect if someone is unintentionally touching the person when a shock is to be delivered. With a light indicator, voice and with a metronome that sets the pace for compressions, it guides the user through the situation.

THE LONGEST GUARANTEE

SAM 360P has the longest warranty in the world. HeartSine Technologies is one of the world's largest manufacturer and produces heart-starters with high quality and reliability. The SAM 360P is a heart-starters made in the EU with European components.

Samaritan PAD 360P

PROPERTIES

Electrodes

PAD360P uses electrodes that unlike other is made with silver alloy. The conduction between the electrode plate and the defibrillator is important for proper data collection. Silver leads data and reduces interference in a superior manner than traditional electrode plates based on aluminum alloy.

Portable and light

PAD360P is made with modern components, weighs only 1 kg and is significantly smaller than other defibrillators.

Resistant

PAD 360P is shock and vibration resistant and has IPclass 56, which is the industry's highest classification regarding dust and moisture resistance. Heart-starter has a factory warranty of 10 years.

Always ready

A status indicator blinks to show that the heart-starter works and is ready to be used. Automatic self-test is performed every week.

Two components, one expiration date

PAD360P's only maintained components, battery and electrodes, are combined in a cassette so-called Pad-Pak™. This unique combination makes only one expiration date needs to be checked. The combination with battery and electrodes is the safest solution on the market.

Low operating costs

With a standby time of at least 4.5 years from date of manufacture, the solution of the Pad-Pak™ is significantly more cost efficient compared to AED with separate battery and electrode plates.

Advanced technology

PAD360P uses patented electrode technology, advanced and stable software and patented SCOPE™ - biphasic technology (a biphasic shock is an electrical current that is passed through the heart first in one direction and then in the other) to analyze the heart rhythm and recommend electric shock if needed.
